CITY OF TORONTO
INDUSTRIAL DIRECTORY
1989

The new industrial directory for 1989 contains information on more than 3,700 firms across the City of Toronto on a wide range of industrial sectors.

The Industrial directory is divided into two sections. Section A contains data on each industrial establishment in the City of Toronto, organized by industry and sector. Section B contains a complete listing of all industries in alphabetical order by establishment.

Firms that are recorded more than once in the alphabetical listings in Section B have multiple locations. Each location is listed independently in Section A.

Data are based on a mailout survey of individual firms which was conducted late in 1988 and are supplemented with data gathered through the Metropolitan Toronto Planning Department's annual employment survey.

The structure of the Database now allows for time series analysis of employment changes by industry, and data are currently available for such comparisons for many sectors.

There are thirteen (13) industrial sectors included in the database. These sectors accounted for a total employment of 86,086 in 1988.
